

## Environmental Drilling & Injection

Limited Access Drilling

Injection Design & Implementation

## Site Remediation & Construction

Facility Decommissioning & Demolition

Brownfield Redevelopment

Waste Disposal

Soil & Groundwater Remediation

Sub-Slab Depressurization Systems

Chemical Injection

## UST/AST Tank Management

UST/AST Removal & Abandonment

Leaking Tank Assessment & Remediation

## Compliance Sampling

Soil & Groundwater Sampling/Analysis

Waste Characterization

Soil Gas, Sub-Slab, & Indoor Air Sampling

Unknown Drum Sampling & Analysis

## Service Capabilities

CFS maintains a broad range of environmental field and technical capabilities. Our specialists and technicians provide all of the services our clients need for successful compliance planning, site investigation, building demolition, site remediation, and property restoration.

Our capabilities include investigative drilling, in-situ injection, soil excavation, hydraulic controls, barrier installations, dewatering, and other specialized services.

We regularly deploy our in-house boring equipment, as well as hollow stem auger and air rotary drilling units. And for projects with limited entry to inaccessible spaces, we are expert in deploying specialized equipment to remediate tight interior and exterior areas.

Whether the need is in-situ remediation requiring enhanced bioremediation, chemical oxidation or straight-forward excavation and dewatering, CFS can design and execute the most efficient strategies for delivering the most cost effective solutions.

## About CFS

CFS is a small, woman-owned environmental services and remediation firm providing fully integrated technical solutions for impacted properties. We deliver complete pollution site analyses, engineering, and repair services to industrial, commercial, residential, and governmental clients throughout the United States.

Our in-house team of remediation experts, experienced drillers, and field personnel give our customers the ability to receive all of their technical services from a single source regardless of project complexity and location.

Whether the need is remediating complex brownfield or industrial sites, completing multiple restoration projects, or simply cleaning up leaking residential oil tanks, CFS has the skills and knowledge to finish the job on time and on budget.

At CFS, we combine the experience and resources of a national organization with the personal attention and knowledge of a local provider. The results are complete solutions delivered efficiently and cost effectively.

## Site Remediation & Construction

CFS delivers the full range of site remediation services for brownfield redevelopment, facility decommissioning and site restoration. Our expert staff regularly install soil depressurization systems, operate and maintain ongoing in-situ treatment facilities, and participate in cost effective remedial design.

## Environmental Drilling & Injection

At CFS, we know that site conditions are often complex and variable. That's why we carefully assess every project to ensure the right equipment and methods are used to efficiently accomplish each planned task. Our experience in well installation, development, rehabilitation, abandonment, and subsurface monitoring ensures that every job we do achieves the desired result.

## Compliance Sampling

CFS provides the complete range of environmental sampling services, and offers special testing for projects requiring immediate information. Our teams regularly conduct discrete and representative soil, groundwater, and soil gas sampling, as well as vertical aquifer profiling for precise characterization.

## UST/AST Management

CFS offers a wide variety of in-house UST and AST management services. These include tank removal, abandonment, cleaning, and leak detection capabilities. Our site assessment and remediation solutions are time-tested and reliable. Our experienced teams are expert in handling petroleum products, solvents, PCBs, metals, corrosive chemicals, and a range of other pollutants.
